

Final Experiment Matrix — 186 Runs

Master tracker for the 186-cell final research campaign. Source of truth: filesystem scan of `runs/final/`. Regenerated by `scripts/update_final_exp.py` after every run; do not hand-edit row data.

Status Summary

- Phase A (Clean): 4/6
- Phase B (Combined): 0/30
- Phase C (Isolation): 0/150
- **Total: 4/186**
- Last updated: 2026-05-14

TransNeXt-tiny replaced TransNeXt-small across the matrix on 2026-05-14 (US-016): ~28M params capacity-match to ResNet50 (~25M) and frees ~310 GPU-h vs the small variant across the 62 TransNeXt rows. The earlier base→small swap (US-004, same day) is preserved in the history. All 62 TransNeXt rows train at 224×224 with full FT + differential LR (head 5e-4 / backbone 5e-5).

Models: `resnet50`, `densenet121`, `transnext_tiny` (Final-campaign default; full FT per US-006; swapped from `transnext_small` by US-016 on 2026-05-14, which itself swapped from `transnext_base` by US-004 on the same day). Datasets: `cifar10`, `mnist`. Levels: L1 Mild, L2 Light, L3 Moderate, L4 Severe, L5 Extreme. Axes (Phase C): `resolution`, `noise`, `blur`, `saturation`, `salt_pepper`.

metrics.json Schema (Final-campaign rows)

Every row's `runs/final/<tag>/metrics.json` carries the following keys (US-008 + US-012):

Key	Type	Source
<code>best_val_acc / best_epoch</code>	float / int	LegacyJSONMetricsCallback
<code>last_val_acc / last_train_acc / last_val_loss / last_train_loss</code>	float	LegacyJSONMetricsCallback
<code>epochs_run</code>	int	LegacyJSONMetricsCallback
<code>wandb_run_id / wandb_entity / wandb_project</code>	string null	LegacyJSONMetricsCallback (US-012) — null when offline
<code>hparams</code>	object	<code>run_systematic._merge_metadata_into_metrics_json</code> (US-008)
<code>hparams_source</code>	object — <code>study_name</code> , <code>best_value</code> , <code>n_trials_completed</code> ,	US-008

PSNR/SSIM live in a sibling `image_quality.json` written by `src/tools/measure_image_quality.py` (US-002) when invoked per-cell.

Phase A — Clean Baselines (6)

#	Model	Dataset	Tag	Status	Best Val Acc	PSNR	SSIM	Started	Duration

Phase C — Single-Axis Isolation (150)

Phase C pins every axis at L1 (mild) values and sweeps only the named axis through L1→L5. At L1, every isolation cell collapses to the Phase B L1 row for the same (model, dataset); `run_all_phases.py --skip-existing` deduplicates these at runtime.

#	Model	Dataset	Level	Axis	Tag	Status	Best Val Acc	PSNR	SSIM	Started	Duration

How this file is updated

- Every Lightning run writes a `metrics.json` and `metrics.csv` under `runs/final/<tag>/`.
- `scripts/update_final_exp.py` (invoked by `DashboardRefreshCallback` on `on_train_end`) scans that tree and rewrites this file in place.
- Manual refresh: `python scripts/update_final_exp.py` (idempotent).
- Status values: Pending / Running / Complete / Failed.
